DETAILED ACTION

This action is responsive to the claims filed on December 30, 2004.

Specification

The title of the invention is not descriptive. A new title is required that is clearly indicative of the invention to which the claims are directed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 5 and 6 are rejected under 35 U.S.C. 102(b) as being anticipated by (WO 01/09889) hereinafter referred to as Nunally.

Claim 1 Nunally discloses “A recording control system for recording a recording object in a recording medium with a recording apparatus, wherein a surplus signal that is outside the recording sensitivity range of a person but within the recording sensitivity range of said recording apparatus is applied to the recording object, and the recording object affected by said surplus signal is recorded in said recording medium.” [Nunally Page 5; lines 9-15 and Figures 2 and 4]

Claim 5 Nunally discloses “A recording control system for recording a sound recording object in a recording medium, comprising means for applying barely

audible sound outside the recognizable area of a person to said sound recording object; and sound recording means for recording the sound output from said sound recording object in said recording medium; wherein said barely audible sound is contained within the sound recordable sensitivity range of said sound recording means.” [Nunally Page 5; lines 9-15 and Figures 2 and 4]

Claim 6 Nunally discloses “A system according to claim 1, further comprising surplus signal generation means for generating said surplus signal; surplus signal generation control means for controlling the generation of the surplus signal and the suspension thereof [Nunally Page 5; lines 9-15 and Figures 2 and 4]; and ID recognition means; wherein, when a specific ID is recognized, said control means suspends the generation of said surplus signal for a prescribed period of time.” [Nunally Page 10; lines 28-33 and Page 11; lines 1-7]

Claims 2 - 4 are rejected under 35 U.S.C. 102(b) as being anticipated by (US 6559883) hereinafter referred to as Fancher.

Claim 2 Fancher discloses “A photography prevention system of a photographic object for recording a photographic object in a recording medium, comprising means for irradiating barely visible light outside the recognizable area of a person to said photographic object, wherein said barely visible light is contained within the recordable sensitivity range of imaging means for recording an image from said photographic object in said recording medium.”

[Fancher Column 3; lines 33-67 item 120]

Claim 3 Fancher discloses “A system according to claim 2, wherein said barely

visible light is infrared light.” [Fancher Column 3; lines 33-67 item 120]

Claim 4 Fancher discloses “A system according to claim 2, wherein said barely visible light is irradiated together with or separate from illuminating light to said photographic object, and said photographic means records the reflected image from said photographic object in said recording medium.”

[Fancher Column 3; lines 33-67].
